

Microsoft®  
Forefront™

Threat Management Gateway 2010

## Enterprise Security for everyone

*The sensational starter price of € 999.- (recommended net retail price) gives you a complete security solution which costs little more than a license does.*

### SecureGUARD TMG STARTER series

This **security appliance** developed for large companies by SecureGUARD provides the same functionality as **high-end solutions**. Consistent reduction of the complexity ensures easy handling and makes commissioning much easier than before.

In conjunction with the **SecureGUARD management tools** and the configuration services, the **STARTER Edition** gives you flexible security on the highest possible level. Access throughout the whole company, branch networking, home office, mobile employees, Web and mail traffic – all this can now be enabled securely and **managed centrally**.

### SecureGUARD & Microsoft – hand in hand

Why not offer your customers an **appliance** which can be integrated into the existing infrastructure like no other solution can? No other **security gateway** communicates so optimally with Microsoft server applications as **TMG 2010** on SecureGUARD hardware does.

**SecureGUARD tools** take care of integration and relieve you of laborious, time-consuming manual configuration – this makes installation much less 'terrifying'.

### Optimum use of user rights

Dual administration of user rights is laborious and above all fault-prone. **SecureGUARD and Forefront TMG** use the user rights of the **Active Directory** in the firewall and facilitate administration considerably while improving the security level.

### SecureGUARD TMG STARTER Edition

#### Small & powerful

The STARTER Edition includes deployment, management, disaster recovery and configuration tools which make life easier for administrators.

#### Flexible & communicative

The new SecureGUARD STARTER Edition is at its most impressive in conjunction with the Microsoft applications **Exchange, OWA, Active Directory, Sharepoint** and **Terminal Server**.

#### Versatile

Additional software from third-party manufacturers can be installed via the management interface, turning the STARTER series into a universal security platform.
